Complete billing instructions > Less Payer rejections > Improved practice workflow

How does it work?

Automated patient demographic data

Patient demographic data is pulled from the practice system.

01

Access to bespoke oncology forms

The doctor performs a clinical consultation with the patient and documents the clinical notes using bespoke oncology forms within the HEALTHone Oncology system.

02

Treatment plan set on HealthONE system

The doctor will then set a bespoke treatment plan for the patient powered and informed by the HEALTHone Oncology system.

03

Bill generated based on treatment plan

The HEALTHone Oncology system will then generate a bill based on the treatment plan and this is pushed backed into the administration system and then switched to the Payer.

04

Chemotherapy prescription module management

The chemotherapy prescription module will then seamlessly manage the treatment plan and will manage the dosages and materials in line with clinical best practice protocols set out in the treatment plan.

05

HealthOne **Connect** ONCOLOGY

Powered By **Altron Healthtech**

With the template driven oncology prescription module, most of the detail needed is pre-populated, assisting in selecting the correct treatment plan and protocol. This has a clinical, efficiency and financial benefit to the practice.

An oncology solution based on clinical best practice protocols that drives the issuing of chemotherapy medication and that tracks and manages the cycle of chemotherapy activities.

Key features include:

- Pathology: blood and histology - laboratory results integrated into the HEALTHone oncology application.
- Patient appointment dashboard: Run your entire practice from your diary.
- Authorisation flow: Includes early warning on expiring treatment plans and authorisation numbers, ensuring less medical claim rejections.
- User specific work flow: Setup your work flow per role (doctor, nurse, authorisations, pharmacy).
- Treatment plans and protocols: Sets of base treatment plans and protocols are supplied, linked to correct ICD10 codes.
- Prescription module: Chemo therapy prescription module, including non-chemo prescriptions.
- Clinical Application: Patient health records, Document manager (sick notes, referrals), Radiotherapy consultation manager.
